

SOFTWARE REQUIREMENTS SPECIFICATION

AI-Powered Autonomous Job Application & Career Assistant Platform

Version	2.1 enterprise delivery package
Prepared by	Harshit Sengar
Date	June 2026
Deployment	Cloud-based SaaS platform

Executive Summary

A cloud-hosted AI career assistant for job discovery, resume optimization, controlled auto-application workflows, pipeline management, interview preparation, and recruiter outreach.

Core Modules

Authentication, profile management, resume intelligence, job search, auto-apply, application pipeline, interview preparation, outreach, scheduling, exports, observability, and admin controls.

Architecture

React/Next.js frontend, FastAPI/Node API layer, PostgreSQL, Redis, object storage, AI provider adapters, queue workers, and Dockerized Playwright automation workers.

Security

TLS, encrypted document storage, scoped OAuth, RBAC, audit logs, user consent controls, token vaulting, rate limiting, and tenant isolation.

MVP Roadmap

Foundation, AI resume workflows, job recommendations and pipeline, controlled application automation, and interview/outreach workflows.

Milestone	Outcome
M1	Secure account, profile, resume upload
M2	ATS score, resume tailoring, cover letter draft
M3	Job recommendations, Kanban, CSV export
M4	Approval-mode auto-apply with audit logs

M5	Interview prep, outreach, calendar integration
